TESTICULAR CANCER

Testicular Cancer is the most common cancer among men ages 15 to 35. It is often an uncomfortable and embarrassing subject for men to discuss; however, it is important to know that when detected early, this is one of the most highly curable forms of cancer with survival rates approaching 85 to 90%.

If you have been watching the news lately, you have almost certainly heard about the famous cyclist- Lance Armstrong from Austin, Texas. He is the winner of the 1999 Tour de France; he is also a cancer survivor who battled and overcame his diagnosis of testicular cancer.

It is important that all young men take the time to learn about self-examination and early warning signs of testicular cancer. We invite you to stop in at the University Health Center to meet with one of our physicians or nurse educators and learn about the diagnosis, treatment and prevention of testicular cancer; alternatively you may also want to log on to Lance Armstrong's website at www.acor.org/TCRC/lance.html.

Please stop in and visit us for written materials and any questions you may have.

We at the Health Center will be happy to help you.

Healthfully yours,

Dr. Healthberry
