

Are you 45-65 years old and having a hard time seeing up close?

You may be able to participate in a study that tests a new eye drop which may help improve near vision for patients with presbyopia.

The study involves 6 visits over about 3 months.

Each visit lasts about 1 to 1.5 hours

Participants may receive up to \$320 for their time
(\$50 per office visit and \$10 for home tests)

For more information about the Presbyopia Study
