Many buildings in the city of Athens have scaffolding that unintentionally becomes permanent because of the conditions of the structure. The objective for this project was to intentionally make the scaffolding that is used to rehabilitate the existing site, permanent. By re-purposing it, it will have the opportunity to create and support new programs and serve the under-resourced refugee community without being overly costly.
Activity Paths
This diagram displays the combined paths that different visitors could potentially take depending on the activity they plan on partaking in. These activities include skateboarding, swinging in hammocks, and gardening/cooking.
Exhibition Iso
Kit of Parts

1. Bolt Leveling Jack Screw
2. Screw on vertical pipe
3. Attach ledger pipe to rosettes
4. Hook platform walkways to ledger pipe
5. Fasten woven fabric to ledger pipe with clove hitch knot
6. Fasten hanging planters to ledger pipe with nylon rope
The woven robins of the project were developed after making multiple woven samples. These samples gave incite on how the robins can be woven as well as attached to the scaffolding structure. This also allows the refugees to draw upon their different cultures and integrate it into the system.
