QUALITATIVE RESEARCH DEFINED

Qualitative research is **multimethod** in focus, involving an interpretive, naturalistic approach to its subject matter. This means that qualitative researchers **study things in the natural settings**, attempting to make sense of, or **interpret, phenomena in terms of the meanings people bring to them**. Qualitative research involves the studied use and collection of a **variety of empirical materials**—case study, personal experience, introspective, life story, interview, observational, historical, interactional, and visual tests—that describe routine and problematic moments and meaning in individuals' lives. Accordingly, qualitative researchers deploy a **wide range of interconnected methods**, hoping always to get a better fix on the subject matter at hand.

Recent Awardees

Since 1957 more than 12,000 scholars have held ACLS fellowships and grants. ACLS fellowships and grants are awarded to individual scholars for excellence in research in the humanities and related social sciences. The peer-review process used to select ACLS fellows enables distinguished scholars to reach broad consensus on standards of excellence in humanities research.

In the 2019-20 competition year, ACLS awarded approximately \$25 million to more than 350 scholars across a variety of humanistic disciplines. Click on links below for new and recent awardees by cohort, along with project descriptions and recipient profiles.

A long, straight road lined with large, leafless trees under a cloudy sky. The road is paved and has a white double line down the center. The trees are tall and have intricate branch structures. The sky is overcast with grey clouds. The overall scene is a perspective view of a tree-lined road.
