*JIF: Journal Impact Factor = (Total number of citations from JCR year to items in "year -2" + citations from JCR year to items in "year -1") ÷ (Total number of citable items, excluding self-citations, in "year -2" + citable items, excluding self-citations, in "year -1")

++ JCI: Journal Citation Indicator; Field-normalized measure of citation impact, where a value of 1.0 means that, across the journal, published papers received several citations equal to the average citation count in that subject category. This matrix is to normalize for various fields of research that has variable publication and citation rate.
